Project Zalahaláp

63 MWp DC PV + up to 50 MW / 200 MWh BESS

FEP FUTUREAL ENERGY PARTNERS

PSH ENERGY

INFO DATE: April 2026

STRICTLY PRIVATE AND CONFIDENTIAL

Opportunity Overview

Project Summary

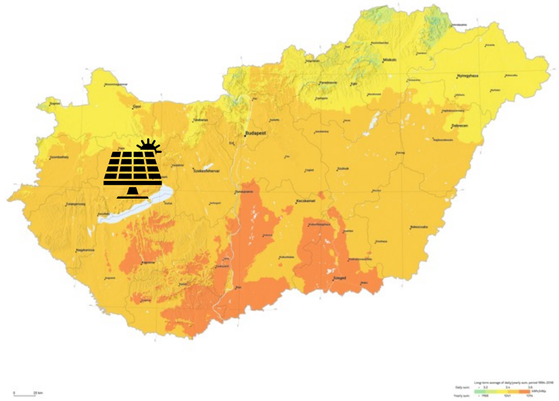

- **Project Zalahaláp** (the “Project”) is a 63 MWp solar PV project under development in western Hungary with an optional **50 MW co-located BESS**, jointly developed by **Pannon Solar Holding (PSH)** and **Futureal Energy Partners (FEP).**
- The Project benefits from **secured grid connection rights** at the future Zalahaláp substation — an exceptionally scarce asset in the Hungarian renewables market, where capacity tenders are on hold and grid access is the primary constraint to new development.
- The PV plant will occupy **~60 ha in Nyirád**, approx. **12 km** from the future Zalahaláp substation. The MV export route has been validated as technically and economically feasible.
- The Project is targeting **RTB status in Q4 2026**, supported by PSH’s hands-on development leadership and FEP’s oversight, financing, and institutional processes.
- A **technology change request** will be submitted to add a 50 MW BESS, positioning the asset to benefit from Hungary’s anticipated 2026 storage incentives and improving commercial flexibility post-COD.
- Renumeration**: full merchant (arbitration + [partial] ancillary grid services if BESS implemented)**

Key Information

63 MWp
49.9 MVA AC

79,70 GWh
1 265 kWh/kWp yearly output

2028 COD

Optional up to 50 MW BESS / up to 200 MWh
Technology change request planned; enables revenue stacking & curtailment mitigation height

Key investment highlights

Land — Approx. **60 ha secured** in Nyirád – contiguous, construction-ready area with no major permitting constraints identified.

Grid — **Scarce 2018-vintage grid connection rights** at Zalahaláp — **no grid connection fee** applies and MV route already validated, a major competitive advantage in Hungary’s congested grid environment.

Sun — **Strong solar radiation levels in western Hungary >1250 kWh/kWp**, supporting stable long-term energy yields and attractive capture pricing.

COD — Clear permitting pathway with **RTB targeted for Q4 2026** and a **2028 COD** per the secured grid agreement.

PSH — **Pannon Solar Holding has delivered >300 MW of Hungarian PV projects**, bringing deep permitting knowledge and proven execution capability to the project.

FEP — **Futureal Energy Partners provides strong financial backing**, governance, and early-works funding – enhancing bankability and buyer confidence.

Permits — The project has already **secured the PV plant building permit**, materially de-risking the development timeline and confirming site-level technical and zoning compliance.

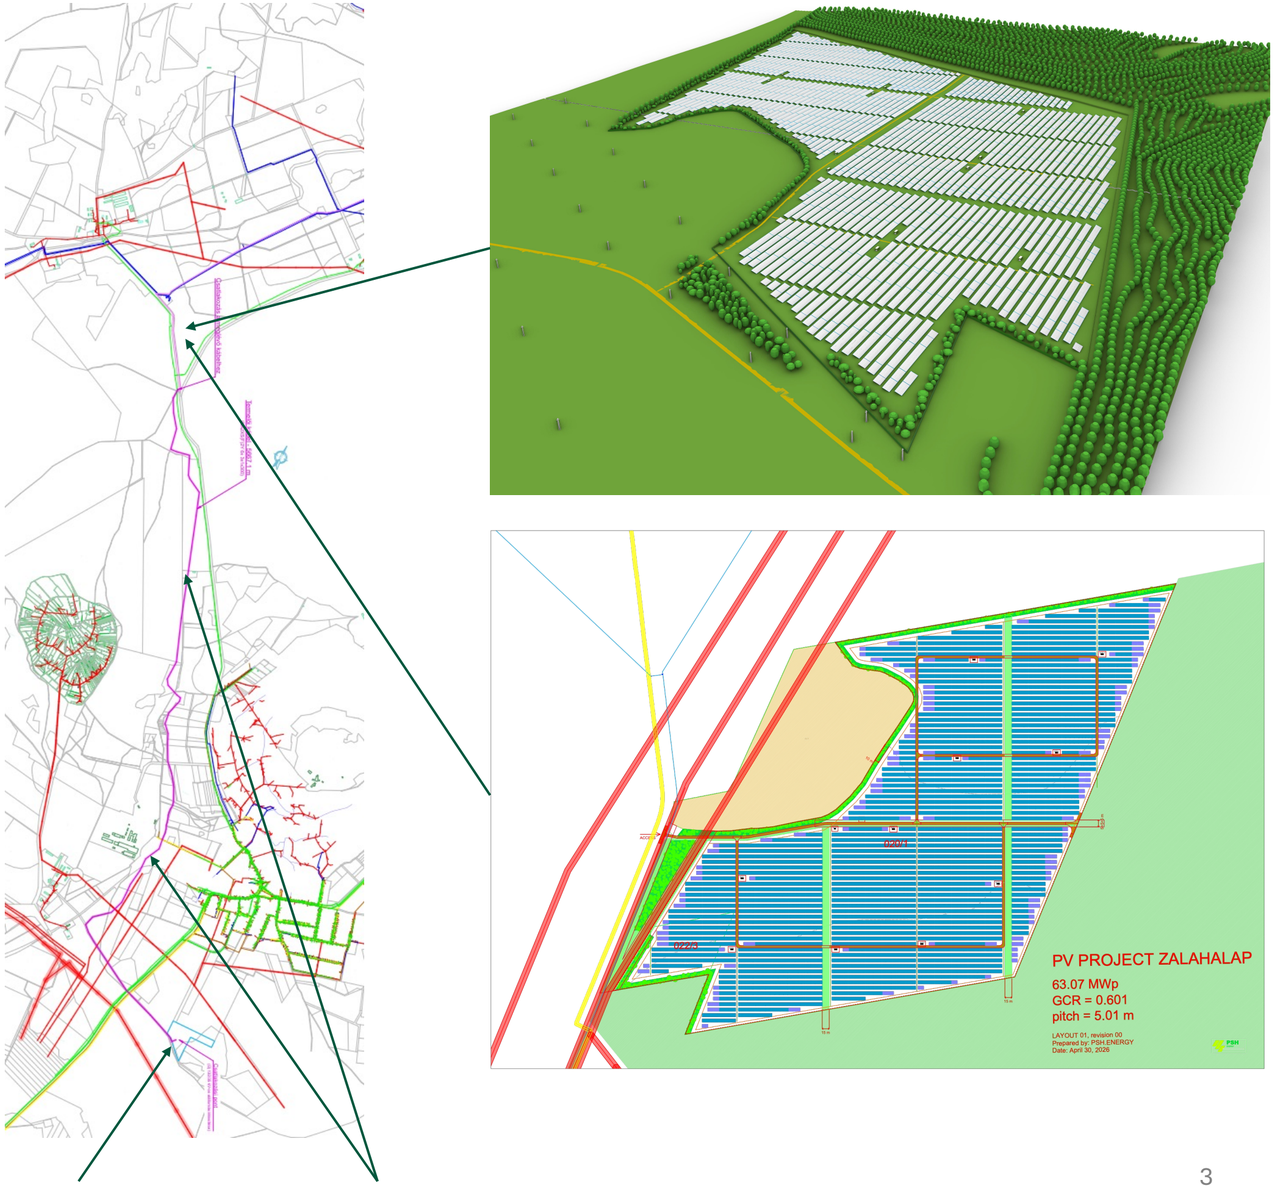

BESS — **Optional 50 MW co-located BESS**, enabling revenue stacking, curtailment mitigation and exposure to Hungary’s expected 2026 storage subsidy scheme.

Map of the plant

Strategic, Low-Risk Site Configuration With Secured Grid Access

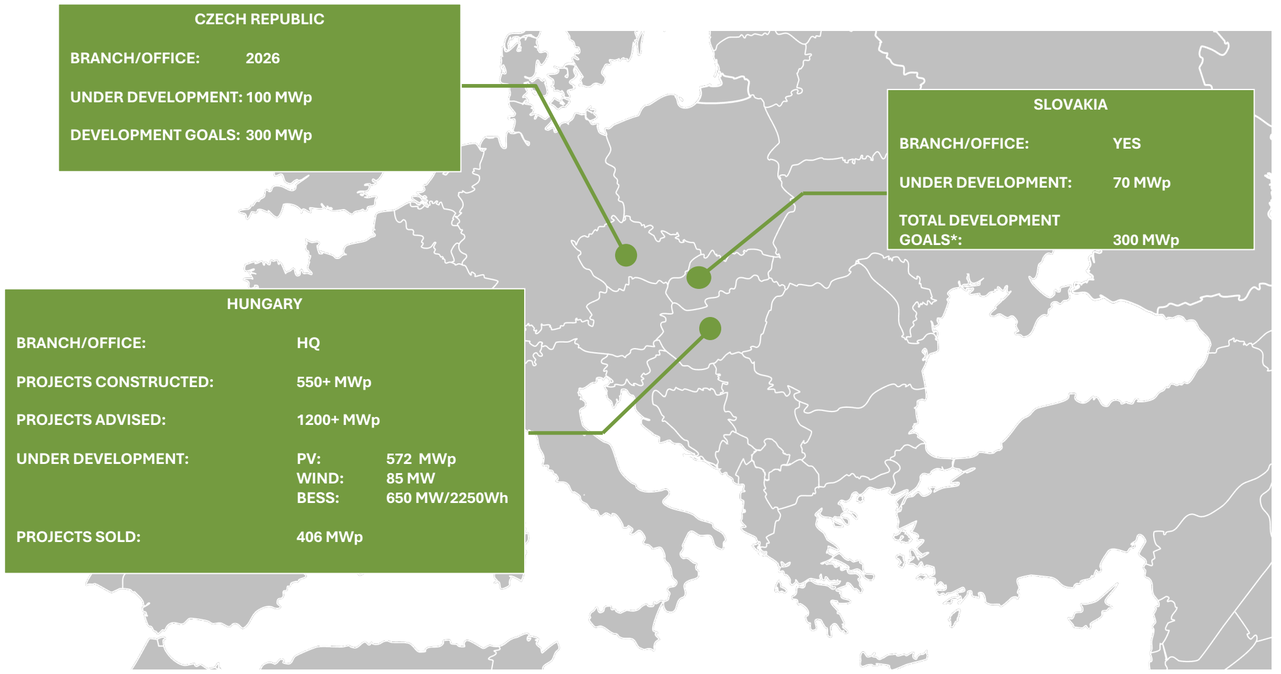

- The Project's grid connection point is fully secured at the Zalahaláp substation, obtained under the advantageous 2018 allocation regime **with a zero grid connection fee** — a rare position in Hungary's heavily congested grid environment, where new capacity tenders are currently suspended and grid access is the primary bottleneck for development.
- **The PV plant will be built on ~60 ha of land in Nyirád**, located approximately **12 km** from the Zalahaláp connection point. The site benefits from strong solar resources and a permitting-friendly area, supporting stable long-term energy performance.
- **The interconnection between the PV site and Zalahaláp will be built via a 12 km 35 kV cable route**, already validated as technically and economically feasible. The planned route is fully supported by a legally enforceable **Right-of-Way,** ensuring that access, land crossing, and construction rights can be secured without dispute or delay.
- **While the cable construction represents a conventional development cost,** the project's zero grid connection fee – enabled by its 2018-vintage connection permit – results in **significantly lower total grid-related expenditure compared** to new Hungarian PV projects, strengthening buyer IRRs and competitiveness.
- **The combination of secured grid rights, controlled land, and enforceable Right-of-Way creates a uniquely low-risk infrastructure foundation**, supporting a smooth RTB process and accelerating transition to EPC contracting and COD financing.

About the developer Pannon Solar Holding

- PSH is the project development, advisory and engineering spin-off company of Electraplan Group – the leading manufacturer of serial steel products for the electrical industry in Hungary since 1993.
- The group entered the Hungarian solar development business in 2015. Since then, it has become a solar business specialist, offering the full range of renewable energy project related services: from project development and engineering, the supply of mounting systems, through EPC and EPCM services, to consulting and advisory.
- Based in Hungary, PSH has offices in Érd (Hungary) and Bratislava (Slovakia)

IMPORTANT MOMENTS IN COMPANY HISTORY

2016	Obtained one of the first utility size PVPP HV grid connections in Hungary	**2022-23**	Secured 17% of all grid capacity available in the first grid tender, and sold 63 MWp PVPP project to a Hungarian investor
2017	Delivered the racking for the first utility size PVPP in Hungary (10 MVA)	**2024**	**Sold 315 MWp PVPP projects in Hungary to international investors**
2019	Developed until RTB and sold to international investor the first utility size PVPP with HV grid connection (28 MWp)	**2025**	**Obtained Building Permits for additional up to 572 MWp PV + 200 MW/400 MWh BESS**
2021-22	Secured 200 MVA grid connection on MAVIR's grid Build over 100 MWp as EPC Contractor for a Hungarian investor (bank financed)	**2026**	**Obtained GCC for 480 MWh BESS**

About Futureal Energy Partners

Futureal Energy Partners (FEP)

A European renewable platform backed by Futureal Group

- **Futureal Energy Partners (FEP)** builds on the Futureal Group's strong regional footprint to drive the **energy transition across Europe.**
- Established in 2023 to manage renewable generation and battery storage at **Futureal's Hungarian sites**, including flagship **4 MW / 8 MWh BESS systems in Maglód and Fót.**
- In 2025, the company expanded its scope and re-branded as FEP, evolving into a **European renewables investment and development platform.**
- FEP combines **project origination, development, investment, and electricity-trading expertise**, delivering value throughout the project life cycle.
- Actively developing and investing **across 9+ European markets**, with a focus **on solar PV, onshore wind, and battery energy storage (BESS).**
- As part of the Futureal Group, FEP operates with **strong governance, financial discipline, and ESG-aligned responsibility,** creating long-term, sustainable value.

Capabilities along the renewable project development lifecycle

ORIGINATION

- Land acquisition through **lease or purchase**
- Identifying **key geographies and markets** for renewables deployment
- **Early analysis** to identify and mitigate risks
- **Equity / debt capital** to proven developers to enhance their project / portfolio footprint

DEVELOPMENT

- **Development capital** to support projects through to ready-to-build
- Flexibility between **Joint Venture or Development Services Agreements** to align incentives and empower project developers

READY-TO-BUILD

- **Flexibility** to hold projects / portfolios and initiate construction or recycle capital on ready-to-build projects
- **Wide network of market** participants with a deep understanding of competitive dynamics and key players

CONSTRUCTION

- **EPC capabilities** to run procurement processes with control over construction costs and timelines
- **Experienced financing team** to optimise capital structure at the project or HoldCo level

OPERATIONS

- **In-house electricity trading team** to maximise revenues from projects
- **Asset management capabilities** to optimise projects and control risks

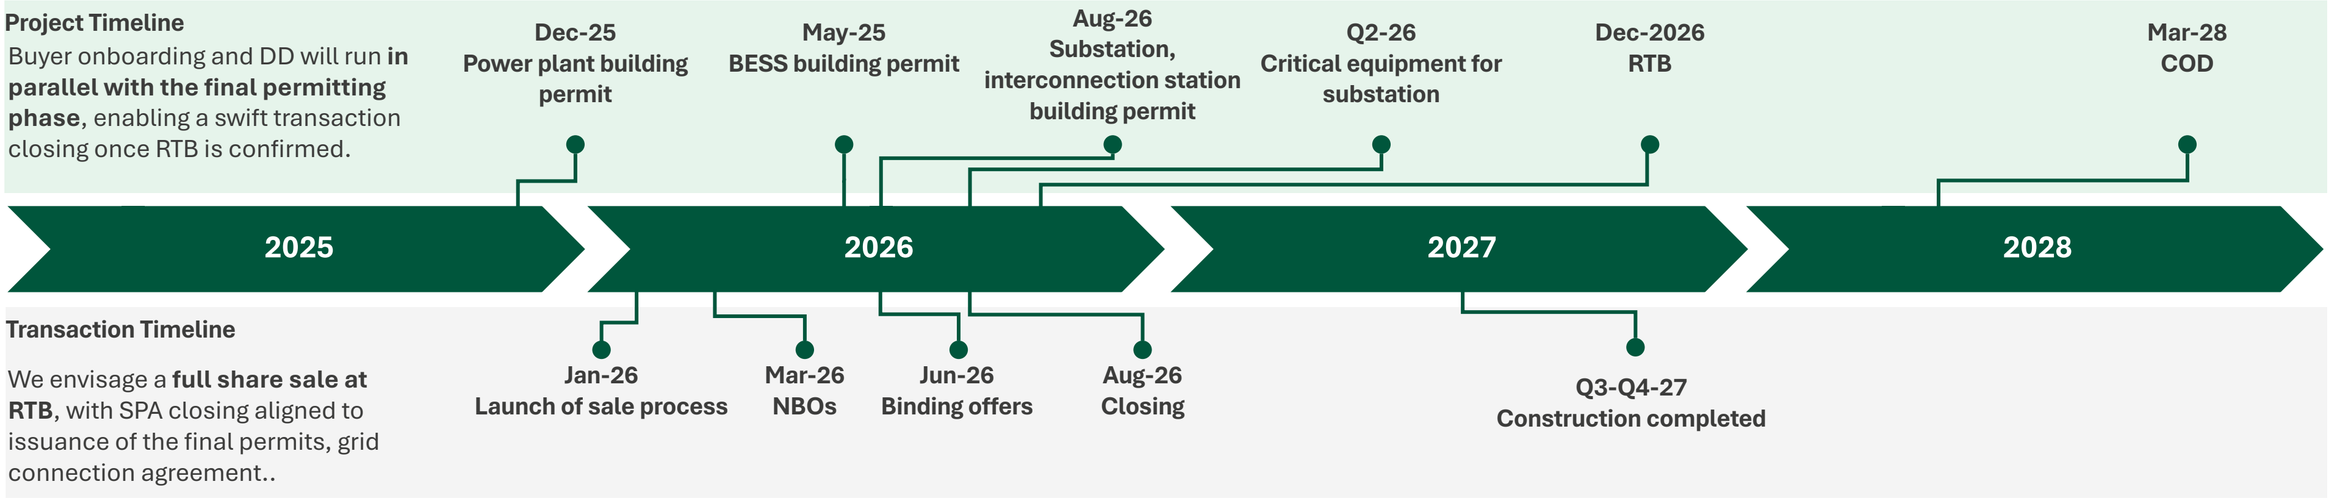

STRICTLY PRIVATE AND CONFIDENTIAL

Transaction timeline* and contacts

Project and transaction timeline

Project Timeline

Buyer onboarding and DD will run **in parallel with the final permitting phase**, enabling a swift transaction closing once RTB is confirmed.

Transaction Timeline

We envisage a **full share sale at RTB**, with SPA closing aligned to issuance of the final permits, grid connection agreement..

Key Contacts
